# PROPANE SAFETY & OPTIMIZATION CHECKLIST

## AS PART OF THE SAFETY AND OPTIMIZATION CHECK, LOOK FOR:

- Out of date tanks
- Worn out stickers and OSHA stickers on both the cage and tanks
- If tanks are inside the building, ensure you are in compliance with NFPA58 (National Fire Code)
- If tanks are outside, make sure tanks are set the proper distance away from flammable substances
- Learn how to inspect a tank by looking at last re-certification date and worn out "O" rings
- Ask your AmeriGas office for a copy of the hazardous material sheet
- Determine if a regular cylinder delivery service or an on-site tank would improve your operational efficiency
